

Semi-rotary drives DRQD/DRQD-B, twin pistons

Semi-rotary drives DRQD/DRQD-B, twin pistons

Key features

FESTO

General

- Rack and pinion principle
- High accuracy
- Extremely good rigidity
- Backlash-free and dynamic
- Piston \varnothing 6 ... 50 mm
- Torque 0.16 ... 50 Nm
- Swivel angle 0 ... 360°
- Defined interfaces
- End-position adjustment $-60 \dots +6^\circ$
- End-position adjustment with end-position cushioning P1J $-320 \dots +6^\circ$
- Choice of mounting options
- Supply port at one end
- Ideal for use in handling applications

Wide choice of variants

Spigot shaft

- Piston \varnothing 6 ... 50 mm

Flanged shaft

- Piston \varnothing 6 ... 50 mm

Adjustable end-position cushioning

- Piston \varnothing 16 ... 50 mm
- PPVJ – pneumatic, adjustable
- YSRJ – hydraulic shock absorber, self-adjusting
- Piston \varnothing 16 ... 32 mm
- P1J – flexible cushioning elements, adjustable

Intermediate position

- Piston \varnothing 16 ... 50 mm
- Allows positioning of the drive shaft in a mid-position

Position sensing

- Piston \varnothing 6 ... 50 mm
- For piston \varnothing 6 ... 12 mm: proximity sensor SME/SMT-10
- For piston \varnothing 16 ... 50 mm: proximity sensor SME/SMT-8

Adapter kits for grippers and drive combinations

- Piston \varnothing 6 ... 50 mm

Energy through-feed

- Piston \varnothing 6 ... 50 mm
- Simple and space-saving installation of tubing through the hollow flanged shaft
- DRQD-...-SD...
1 ... 4 DUO tubes

- Piston \varnothing 16 ... 50 mm
- Simple and space-saving installation of tubing and cables through the hollow flanged shaft
- DRQD-...-E...
1 ... 2 DUO tubes and 2 ... 4 electrical cables

Mounting options

using through holes

via thread in housing profile

- Material note	Copper, PTFE and silicone-free		

Direction of rotation of the drive shaft

Pneumatic actuation of ports 1 or 2 produces a rotational movement in direction R1 or R2 respectively.

Semi-rotary drives DRQD-6 ... 12, twin-pistons

Technical data

Max. permissible radial and axial forces on the drive shaft

Combined load

A semi-rotary drive DRQD-8-... is to be statically loaded with a radial force $F_y = 60\text{ N}$, which is at a distance of $Z = 5\text{ mm}$ from the housing, and an

axial force $F_{x, \text{push}} = 30\text{ N}$, which is at a distance of $V = 12\text{ mm}$ from the shaft (→ diagram of flanged shaft on right).

Question:

Is it permissible to statically load a semi-rotary drive DRQD-8-... with these combined forces?

Answer:

Graph 1 (→ 13) indicates that the maximum permissible radial force is $F_{y, \text{max. (stat.)}} (5) = 193\text{ N}$ for a distance

$Z = 5\text{ mm}$. Graph 3 (→ 13) indicates that the maximum axial force is

$F_{x, \text{push max. (stat.)}} (12) = 169\text{ N}$ for a distance $V = 12\text{ mm}$.

The following equation applies to combined loads:

$$\frac{F_y(z)}{F_{y, \text{max. (z)}}} + \frac{F_{x, \text{push}}(v)}{F_{x, \text{push, max. (v)}}} + \frac{F_{x, \text{pull}}(v)}{F_{x, \text{pull, max. (v)}}} \leq 1$$

The following values are assumed:

$F_y(5) = 60\text{ N}$
 $F_{x, \text{push (stat.)}}(12) = 30\text{ N}$
 $F_{y, \text{max. (stat.)}}(5) = 193\text{ N}$
 $F_{x, \text{max. (stat.)}}(12) = 169\text{ N}$

With values inserted:

$$\frac{60\text{ N}}{193\text{ N}} + \frac{30\text{ N}}{169\text{ N}} \leq 1$$

$$0.311 + 0.178 \leq 1$$

$$0.489 \leq 1$$

Thus the drive may be statically loaded with the forces indicated above.

Semi-rotary drives DRQD-6 ... 12, twin-pistons

Graph 4

$$F_{x, \text{max. (dyn.)}} = f(v)$$

Semi-rotary drives DRQD-6 ... 12, twin-pistons

Technical data

Energy through-feed

The energy through-feed consists of DUO tubing (two lengths of tubing are fused together into a pair), whereby each tube has an O.D. of 3 mm. Compressed air is supplied via the push-in

fittings in the transfer plate. Only Quick-Star push-in fittings may be used to connect compressed air tubing to consuming devices (e.g. grippers).

DRQD-...-SD...

- For piston \varnothing 8 ... 12
- Swivel angles of up to 180° are possible
- 1 DUO tube

Technical data		8	12

Technical data

FESTO

Max. permissible radial and axial forces on the drive shaft

Combined load

A DRQD-B-16-...-FW is to be statically loaded with a radial force $F_y = 300\text{ N}$, which is at a distance of $Z = 15\text{ mm}$ from the flanged shaft, and an axial

force $F_{x, \text{push}} = 100\text{ N}$, which is at a distance of $V = 25\text{ mm}$ from the shaft (→ diagram of flanged shaft on right).

Question:

Is it permissible to statically load a DRQD-B-16-...-FW with these combined forces?

Answer:

According to graph 1 (→ 33), a distance of $Z = 15\text{ mm}$ results in a maximum permissible radial force

$F_{y, \text{max. (stat.)}}(15) = 400\text{ N}$.
According to graph 3 (→ 33), a distance of $V = 25\text{ mm}$ results in a maxi-

mum permissible axial force
 $F_{x, \text{push max. (stat.)}}(25) = 550\text{ N}$.

The following equation applies to combined loads:

$$\frac{F_y(z)}{F_{y, \text{max. (z)}}} + \frac{F_{x, \text{push}}(v)}{F_{x, \text{push, max. (v)}}} + \frac{F_{x, \text{pull}}(v)}{F_{x, \text{pull, max. (v)}}} \leq 1$$

The following values are assumed:

$F_y(15) = 300\text{ N}$
 $F_{x, \text{push (stat.)}}(25) = 100\text{ N}$
 $F_{y, \text{max. (stat.)}}(15) = 400\text{ N}$
 $F_{x, \text{max. (stat.)}}(25) = 550\text{ N}$

With values inserted:

$$\frac{300\text{ N}}{400\text{ N}} + \frac{100\text{ N}}{550\text{ N}} \leq 1$$

$$0.75 + 0.182 \leq 1$$

$$0.932 \leq 1$$

Thus the drive may be statically loaded with the forces indicated above.

Semi-rotary drives DRQD-B-16 ... 32, DRQD-40 ... 50, twin-pistons

Technical data

Z1 intermediate position module

For \varnothing 16 ... 50

The intermediate position module is fitted in place of the end cap, and allows for adjustable, backlash-free positioning of the drive at 50% of its nominal rotation angle. The intermediate position module is available for nominal rotation angles of 90° and 180°.

The intermediate position module cannot be used in combination with cushioning type DRQD-...-P1J.

Function

A piston incorporating two screw fastened piston rods is pressurised and shifts the semi-rotary drive gear racks until both make full contact with the

piston rods in the mid-position module. The mid-position can be accurately adjusted within a range of $\pm 10^\circ$ with the adjusting screws in the piston

rods. Thanks to the hollow shaft design of the piston rod, adjustment can be performed under pressure. The through rods in the mid-position

module are guided by means of multiple bearings in the cover and in the adapter.

Actuation

In order for the mid-position module to function, the DRQD basic actuator must be pressurised at both sides.

This can be accomplished with two different types of actuation:

Actuation type 1

- Mid-position module (supply air must be restricted) with a 3/2-way valve

- DRQD basic drive with a 5/3-way valve, mid-position pressurised

Actuation type 2

- Mid-position module (supply air must be restricted) with a 3/2-way valve

- DRQD basic drive with two 3/2-way valves, spring return

Note

Even if the semi-rotary drives DRQD-B-16 to 32 have been equipped with shock absorbers (type YSRJ), the mid-position may not be loaded with

more than the max. permissible mass moment of inertia for the PPVJ variant! The reason for this is the cushioning: Whereas loads can be absorbed in the

end positions with the shock absorbers, the mid-position is only equipped with basic flexible cushioning. Additional information on the

permissible mass moment of inertia for the sizes 40 and 50 mm: **→ 27**

Semi-rotary drives DRQD-B-16 ... 32, DRQD-40 ... 50, twin-pistons

Technical data

Energy through-feed

DRQD-...-SD...

The energy through-feed consists of one to max. four DUO tubes (fused tubing pair), whereby each tube has an O.D. of 3 ... 6 mm. Compressed air is supplied via the push-in fittings in

the transfer plate. Only Quick-Star push-in fittings may be used to connect compressed air tubing to consuming devices (e.g. grippers).

DRQD-...-E...

The energy through-feed consists of one to max. two DUO tubes (fused tubing pair), whereby each tube has an O.D. of 4 ... 6 mm. Compressed air is supplied via the push-in fittings in the transfer plate. Only Quick-Star

push-in fittings may be used to connect compressed air tubing to consuming devices (e.g. grippers). In addition, up to four proximity sensors can be connected by means of this energy through-feed.

Transfer plate

- For piston \varnothing 25/32
- Swivel angles of up to 180° are possible
- 2 DUO tubes each with O.D. 4 mm
- 2 4-pin cables to 4 3-pin cables

DRQD-...-E644

Transfer plate

- For piston \varnothing 40/50
- Swivel angles of up to 180° are possible
- 2 DUO tubes each with O.D. 6 mm
- 4 3-pin cables

Technical data		16	20	25	32	40	50
Piston \varnothing		16	20	25	32	40	50
Number of DUO tubes	E422	1		-			
	E444	-		2		-	
	E644	-		-		2	
Standard nominal flow rate (per tube) [l/min]	E422	min. 130		-			
	E444	-		min. 130		-	
	E644	-		-		min. 250	
Theoretical air consumption per line at 6 bar [cm ³]	E422	9.5		-			
	E444	-		9.5		-	
	E644	-		-		24.4	
Operating pressure as a function of ambient temperature [bar]		0 ... 10 (at -10 ... +30 °C)					
		0 ... 9 (at +30 ... +40 °C)					
		0 ... 7 (at +40 ... +60 °)					
Tube O.D. on flanged shaft drive side [mm]	E422	4		-			
	E444	-		4		-	
	E644	-		-		6	
Push-in fittings for connection to consuming device [mm]	E422	QS-...-4 for tube O.D. 4 mm		-			
	E444	-		QS-...-4 for tube O.D. 4 mm		-	
	E644	-		-		QS-...-6 for tube O.D. 6 mm

	Assembly	Length [m]	Part No.	Type
	Insertable from above	2x 0.5	151 680	ABP-5-S

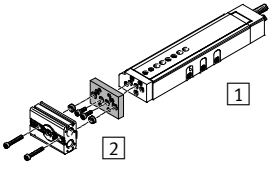

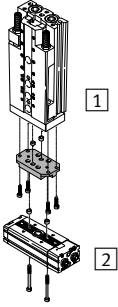

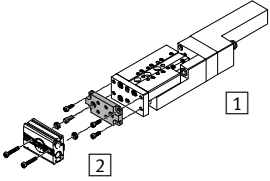

Semi-rotary drives DRQD/DRQD-B, twin pistons

Accessories

Adapter kit
HAPS, HMSV

Material:
Wrought aluminium alloy
Free of copper and PTFE
RoHS-compliant

 Note
The kit includes the individual mounting interface as well as the necessary mounting material.

Permissible drive/drive combinations with adapter kit				Download CAD data → www.festo.com

1) Corrosion resistance class CRC 2 to Festo standard FN 940070
Moderate corrosion stress. Indoor applications in which condensation may occur. External visible parts with primarily decorative requirements for the surface and which are in direct contact with the ambient atmosphere typical for industrial applications.

2) Packaging unit quantity

- Corrosion resistance class CRC 2 to Festo standard FN 940070
Moderate corrosion stress. Indoor applications in which condensation may occur. External visible parts with primarily decorative requirements for the surface and which are in direct contact with the ambient atmosphere typical for industrial applications.
- Packaging unit quantity.
- The screws and centring sleeves listed are not included in the scope of delivery of the drives.
- Possible in combination with DRQD-...SD32 and DRQD-...SD42 (flanged shaft with energy through-feed).
- Only for DGEA-...

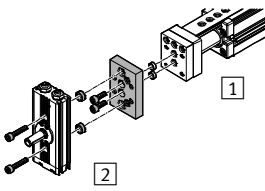

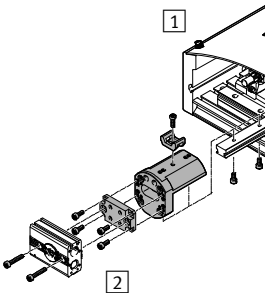

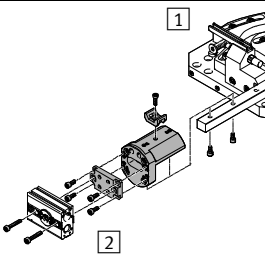

Semi-rotary drives DRQD/DRQD-B, twin pistons

Accessories

Adapter kit
